WEEKLY MORBIDITY REPORT EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

Number of Admissions During the Week X 52

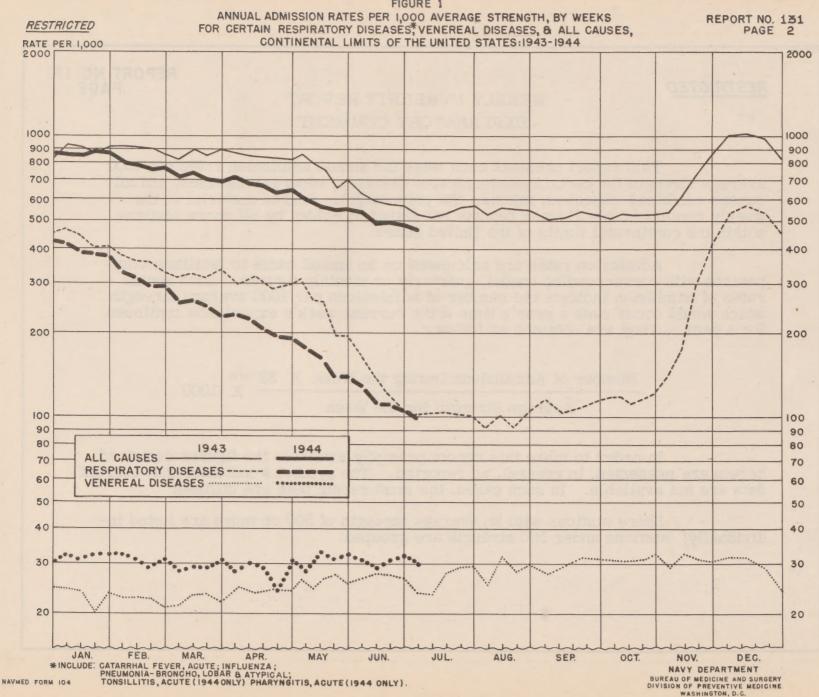

Average Strength for the Week

X 1000

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

CURRENT TRENDS

Week Ending 1 Jul 1944

The admission rate for All Causes fell again this week and the curve has now stood for four consecutive weeks at a lower level than was recorded for any week of 1943. The highest rate (943) was reported for the Potomac and Severn River Commands, the lowest (376) for the 12th District.

The respiratory disease curve continued downward. Though the curve for these infections stands at a slightly lower level than the 1943 curve for the corresponding period, the mid-summer low of 1943 has not yet been equaled. The curve turned upward only in the 1st, 4th, 7th, and 8th Districts and in the Potomac and Severn River Commands. The highest rate (147) was reported for the Potomac and Severn River Commands, the lowest (67) was reported for the 12th District.

The venereal disease curve, after a rise in the two previous weeks, returned to 30 this week. The 8th District reported the highest rate (38), the 4th District the lowest (21).

Influenza and Catarrhal Fever. The downward trend for these infections continued. For four consecutive weeks the curve has stood at a level below that recorded for any week of 1943. The highest rate (96) was reported for the 13th District, the lowest (46) for the 12th District.

Pneumonia--Broncho and Lobar. The rate for these infections dropped to 1 for the second time this year. The curve stands at a point lower than was recorded for any week of 1943. The 13th District reported the highest rate (5). The 7th District and the Potomac and Severn River Commands reported no cases.

Pneumonia, Atypical. The rate for this infection continued for the seventh consecutive week at 2. The 1944 curve consistently stands above the 1943 curve for the corresponding period. The highest rate (5) was reported for the 8th District. The 4th, 12th, and 13th Districts reported no cases.

WEEKLY MORBIDITY REPORT

REPORT NO. 131 PAGE 4

CURRENT TRENDS -- CONTD.

Tonsillitis and Pharyngitis, Acute. The downward trend for these infections continued and the curve stands at the lowest point recorded in 1944. The highest rate (68) was reported for the Potomac and Severn River Commands, the lowest (17) for the 6th District.

Rheumatic Fever, Acute. The rheumatic fever rate was reported at 2 for the fourth consecutive week. This compares favorably with the 1943 rate of 4.1 for the corresponding week. The highest rate (12) was reported for the 13th District. The 4th and 6th Districts and the Potomac and Severn River Commands reported no cases.

Scarlet Fever. The scarlet fever rate dropped to a level around 2 for the first time since the last week of July 1943. The curve for this infection turned upward only in the 4th and 7th Districts. The highest rate (28) was reported for the 13th District. The 1st, 3rd, 5th, and 6th Districts and the Potomac and Severn River Commands reported no cases.

Cerebrospinal Fever, Meningococcic. The rate for this infection dropped to the lowest point recorded since the second week of December 1942. Only one case was reported for the week; that occurred in the 3rd District.

Malaria. For the eighth consecutive week the malaria rate has stood at 2. Though the 1944 curve stands below the 1943 curve it is well above the 1942 curve for the corresponding period. The highest rate (4) was reported for the 11th District. The Potomac and Severn River Commands reported no cases.

Measles. The rate for measles continued for another week at 2. This compares favorably with rates of 2.7 and 6.5 for the corresponding weeks of 1943 and 1942 respectively. The highest rate (6) was reported for the 13th District. The 1st, 4th, and 7th Districts reported no cases.
